Hibercounter
Match Line; Play Sound

Carlo Götz

Where?

github.com/c-goetz/hibercounter

What?

- matches each line on `stdin` against multiple regexes
- first matching regex triggers a sound
- simple "synth engine" for custom sounds

Why?

- process logs during development without looking at them
  - useful to get an overview how many DB/HTTP requests are sent
- humans can process quite a lot of audio

Demo

Demo

Features

- simple "synth engine"
  - oscillator -> ADR envelope

```
           -\
   A      / \  D
      -/      \
     /         \
    /           --\    R
  -/               --\
  /                   --\
 /                       --
```

- hot reload config (WIP)

TODO

- fix config hot reloading
- write tests
- factor code
- make `geiger` voice sound like its name
